

## 1 CARPENTER CLAMP

2. The invention resolves the problem of fixing small or middle-sized wooden work-pieces while they are processed in the carpenter or a hobby - workshop or while making airplane and ship models and similar, possibly on the usual table, in the simplest and cheapest possible way.

3. The Clamp is composed of two abutments plugged into the desk-plate or into an additional basic plate and a clamp, shaped as the archimedean spiral which is mounted opposite these abutments. By turning the clamp, work-piece is tightened sideways to the abutments. The greater force produce the tool in the work-direction, the greater is the force that tighten the workpiece.

4. The carpenter clamp is a simple but very useful aid when fixing small and middle sized work-pieces while manually or with use of electrical tools are , treat, and it can be used on any workplate that can be drilled by a few smaller (6 - 8 mm) holes, including various versions of folding tables. For small and middle sized work-pieces, it substitute the carpentry bench which is far more expensive.

With the additional base plate, the tighten can also be used on a table which dare not be damaged. That allows to temporarily turn a kitchen table or a similar surface into a working table for amateur carpentry, or construction of airplane and ship models, eg. and leaves the surface intact once the work is done.

When not in use, this accessory takes only the minimum amount of space.

The offerer also proposes workshop drawings for the choosed version of invention (wood, plastic, size)

5. carpenter clamp, Modeling clamp, Fixture tool, hobby tool

## 6. BUSINESS PLAN duration (kal. days):

Day of receipt of notification of acceptance of invention from the buyer has zero day of project

- Obtaining of International protection of designs (at the expense of the buyer) 90
- Agreement on a variation of solutions (wood or plastic, defining the size or more sizes, fitting into an existing product - for example, demountable table, etc.) including the exchange of project backgrounds 14
- Development of constructive and workshop documentation (offered for \$ 1400 per variant) 14
- Delivery and acceptance of, or comment on the documentation 10
- Possible correction solutions towards the customer requirements (to the extent of agreed variations) 10
- Making of agreed variants of Prototyp (according to actual costs in Croatia + 20%) 14
- functionality testing on the new prototype (allready done on the existing prototype) 7
- payment by the offerer 10

### **LICENSE PRICE**

unexclusive license for exploitation of the idea is offered for 2000 \$ + 1 % of the wholesale income, without the rebate.

If an unexclusive license is agreed upon, the bidder keeps the right to consign the invention to other buyers.

Exclusive license to only single buyer has the 5000 \$ + 2% of revenues from wholesale  
In case of exclusive license, the bidder can not offer invention to other customers.

**REMARK:**

- a) On buyers request, the offerer can arrange production in Croatia on buyer's behalf for small quantities.
- b) The invention is protected with the croatian patent, but the deadline for the international patent protection has expired. However, it is possible to protect the design on targeted areas, but the bidder can not bear the expenses of such protection. He can make the entrance of design protection for a price of 1200 \$ by version.
- c) The bidder has check the functionality of the solution on the existing prototype. (see the photo)
