

Fridge of Nature

Fridge of Nature is the solution for food storage in the great outdoors.

Fridge of Nature can keep your food cold for months at a time, and no batteries or electric power is required. All you need to keep your food cold is water.

The bag is made up of two compartments. The large compartment is where you store your food, freshly caught fish or drinks.

Fill the smaller compartment with rocks or sand and then throw it in the water and let the bag sink to the bottom. You only need to go a couple of meters below the surface to find temperatures around 4-10 degrees celcius.

With the long paracord attached to the bag you can secure it around any object like a tree.

- Keeps your food cool – as long as you wish
- No electric power, no batteries, no ice
- 100% Waterproof
- Very compact and low weight
- Durable materials
- Works great for many outdoor activities, not only for fishing
- Easy manufacturing
- Unique product – there are no similar solutions available today
- Outperforms ordinary coolers both in performance, size and weight
