

## CARGO CONTAINMENT UNIT

The Cargo Containment Unit (C.C.U.) is a lightweight, durable and easy to use system designed to contain cargo on any flatbed truck. The C.C.U. alleviates the need for cargo nets and prevents damage to cargo from weather. The C.C.U. is easy to assemble around cargo and can be tailored to the desired height needed. Unused panels can simply be stowed away. While cargo nets may shift during transportation, the C.C.U. prevents cargo from shifting while also ensuring cargo straps do not become loose. The system also prevents damage from vehicle accidents which can save companies money from having to replace damaged goods. So whether cargo is being transported by civilian companies on a highway or a military transport through rough terrain, the C.C.U. will keep cargo safe and secure.

Weather stripping to prevent water and sand from entering the unit.

Container can be expanded vertically by adding additional rows of panels.

Embossed letters to line up panels

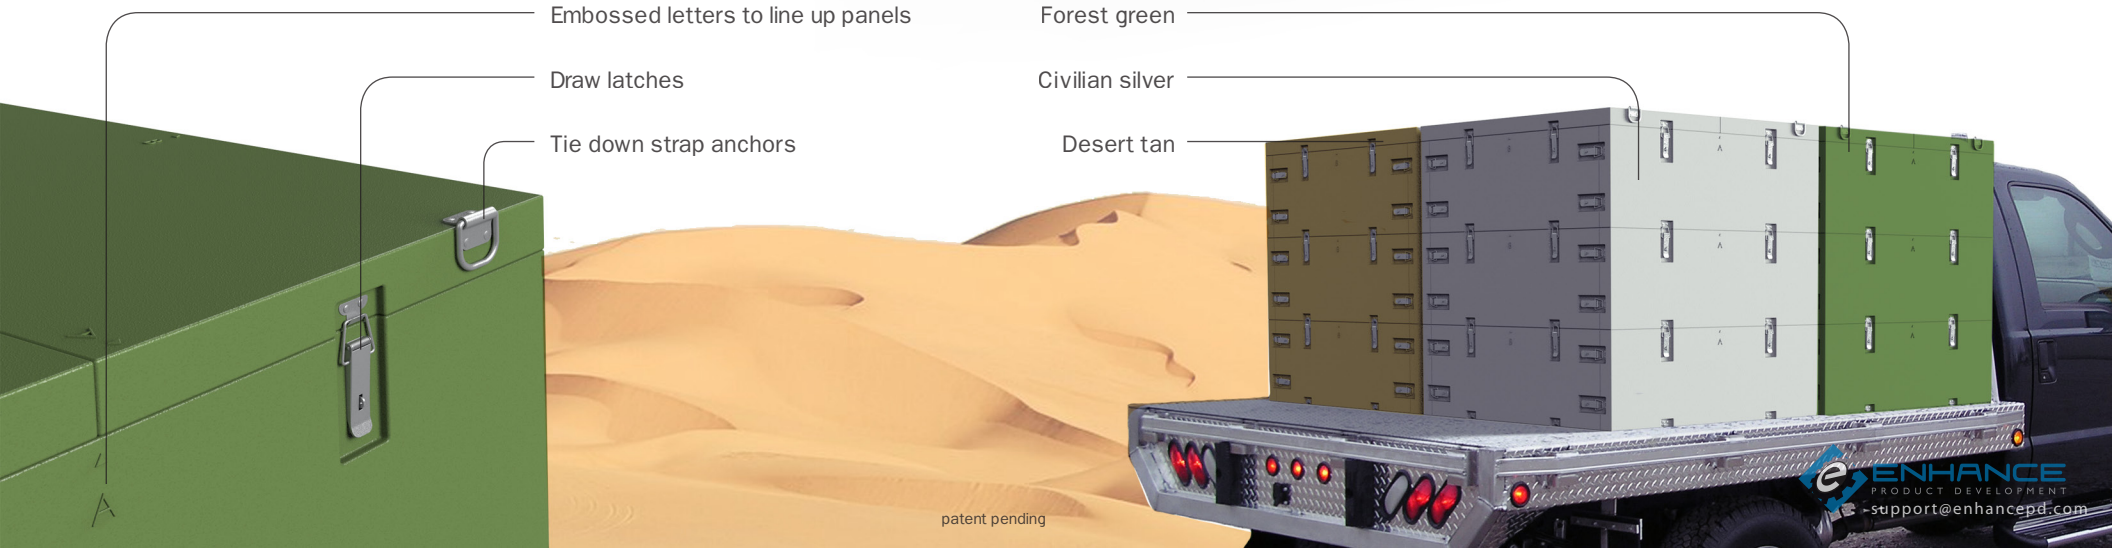

Draw latches

Tie down strap anchors
