

## OVERVIEW OF NAMESETS

Namesets is a method of working using names, devices and data sheets in file sharing groups as an alternative to applications, input and email. This new method expands networking, profitable Internet business and further innovation in pursuit of productivity.

The screenshot shows a software interface with a menu bar at the top containing 'Names', 'Images', 'Text', 'Analysis', 'Timing', and 'System'. Below the menu bar is a toolbar with buttons for 'New', 'Rename', 'Move', 'Delete', 'Copy', and 'Shortcuts'. The main area displays a table with the following data:

Roof	Lobby		Finishes	
Enclosure	Flat 1	Lobby	Fittings	Bath
Floor 10	Flat 2	Bathroom	Sanitary	Basin
Floor 9	Flat 3	Bed 1	Equipment	Wc suite
Floor 8	Stairs	Kitchen		
Floor 7		Living		

*Example screen shot (Names device)*

Because of the layout and animation (names re-arrange themselves to suit each selection) Names devices provides speedy access to data, in this example, for a complete residential development. Owners, designers, manufacturers, constructors, property managers and end-users select names, devices and tools to view existing data sheets, or add new data pertinent to their interests or responsibilities.

Membership of an Internet registry is an alternative to buying software. Registries provide good connections and the means to share information. Namesets and devices are traded but the main source of income is from consensual advertising (the seller provides data in a format suitable for potential buyers to re-use in their work). The seller pays for automated advertising in the right place and at the right time. Searches are interactive and results always pertinent..
